- People management and coaching delivery experience
- Training experience
- Strong problem-solving skills
- Strong organizational, multi-tasking, and team-work skills
- Languages: Spanish (Native speaker), English - C1

Experience

Sr. Deployment Specialist / Cheetah Digital

AUGUST 2018 – MAY 2020

My day to day at Cheetah started by receiving the assets from the client, then slicing the PSD file into JPG or GIF (animated) images and coding the campaign using HTML and CSS languages, making sure the email rendered properly across all devices and platforms. I also performed Quality Analysis on the campaigns for my peers, using Litmus QA App and live testing making sure the emails complied with the client requirements and were error free.

A more technical part of my duties consisted on creating relational database segmentation for the campaigns, making sure each email targeted the specific customer segment instructed by the client. I also created Dynamic Content for the campaigns to display different content like banners or disclaimers to specific customer groups.

Being in a Sr. position came with several other responsibilities, I was the main point of contact for my team and the client during the PM shift, and it was my main goal to remove any roadblocks in the production process for both parties, that included troubleshooting campaigns for my peers that had rendering issues, doing last minute creative changes on Photoshop, and effectively communicating with the client to ensure we were all on the same page about the day to day campaigns. I was also given training responsibilities for new hires in the team and teaching the mentioned technical knowledge to the more tenured associates once they were ready to move forward.

Some of my accomplishments at this job:

- I was promoted to the Sr. position after being at the company for 1 year.
- I won the Most Valuable Player award after Peak Season 2019.
- I was chosen to be a part of a pilot team that started early 2020, transitioning the Cheetah Loyalty clients from the Manila team in Philippines to the AMER team based in Costa Rica and the US.

Web Developer (CMS) / Accenture

NOVEMBER 2017 – TO JULY 2018

My main duties were creating and updating content for the client's website using Content Management System "Open Text/Team Site".

Using the JIRA app to track the bugs reported by the client and the QA team, as well as communicating with them and Program Managers on updates and completion of the fixes.

Using the Confluence app for documenting information regarding releases, as well as information on how to troubleshoot web development issues.

Email Marketing Account Manager / Experian

APRIL 2017 – TO NOVEMBER 2017

Creation, testing and deployment of Email Marketing campaigns for an important client. Using HTML and CSS code to build campaigns based on assets provided by the client (PSD creative).

I oversaw troubleshooting and fixing any rendering issues in the campaigns, following the latest standards of email complaint HTML code.

Sr Seller Support Associate / Amazon

JANUARY 2012 – TO MARCH 2017

I started as a Seller Support Associate and moved through different positions in the company, here is a summary of the roles and responsibilities I was given during my time at Amazon.

- I assisted the training team both as a Mentor and as a Trainer in several classes for new hire associates, this helped me obtain really good experience in both adult teaching as well as managing small to large groups and delivering coaching to my trainees and peers.
- I had a seasonal position for several months as Seller Support Advisor in which my duties were to handle customer escalations, providing floor support as well as coaching associates, as well as reporting back to stakeholders on areas of improvement both with processes and employees.

- During my last couple of years in the Seller Support team, I worked as a QA Analyst, doing case studies, creating reports, and communicating with stakeholders and other team members located in USA, Ireland, and India. This helped develop my skills in Project Management and MS Excel, as well as gaining experience working with cross-cultural teams.
 - Finally, I moved to a seasonal position where I spent my last few months at the company as Content Developer. We used an internal CMS (Content Management System) to manage content for an automated troubleshooting app used by Amazon CS associates.
-

Education

High School Diploma / CTP Jesús Ocaña Rojas

I completed my High School Diploma in 2008.

Bachelor of English Teaching/ Universidad Hispanoamericana

Currently on hold, 50% of the curriculum completed.
